**CENTER FOR INNOVATION IN TEACHING AND
LEARNING**

Dawn Bohn – October, 2015

Dear Master of Science Student in the Off-Campus Program:

Congratulations on your decision to complete the Off-Campus Master of Science (MS) Program in the Department of Food Science and Human Nutrition (FSHN) at the University of Illinois, Urbana-Champaign! This program was one of the first extramural programs created at the University of Illinois, and it has undergone many changes and updates to remain current and relevant for today's students who continue working in their professional positions while seeking an advanced degree. You will find that the Online Food Science MS Program uses a lecture-based format delivered via distance education technologies. This provides you with the ability to access courses, even when your work and travel schedule or residential location may change.

The University of Illinois, Urbana-Champaign, is a Research I institution, and as such, faculty members participating in the Online Food Science MS Program are conducting innovative and critical studies that are leading the food sciences forward. These same faculty members are award-winning instructors, and they will share their discoveries, fundamental knowledge and professional experiences with you in interesting and engaging ways. Guest lecturers also may be involved, depending on the topic and desire to introduce you to additional experts in various areas. During your participation in the Online Food Science MS Program, you will build a network of contacts as you virtually interact with peer students who also are working professionals.

As described in this guide, the Online Food Science MS Program requires 32 hours of rigorous course work. Your challenge will be to organize and manage your course requirements and learning experiences with your other roles, including professional, family and social responsibilities. This may be tough at times, and the rewards in earning an advanced degree that comes from expanding your knowledge, thinking critically about the current and future state of food sciences and solving existing and emerging professional problems will be worth your efforts.

The Online Food Science MS Program Guide is to be used as an informational and navigational tool. Sections on program requirements, courses, grading policies, student advising, the University of Illinois Graduate College policies and procedures on admissions and enrollment, as well as other policies, procedures and guidelines applicable to the program are included. For further information on University policies and procedures, please also see the University of Illinois at Urbana-Champaign Handbook for Graduate Students. This Online Food Science MS Program Guide

will help lead you and provide advice as you progress through the program. Because policies and procedures are modified from time-to-time at the University, please consult with the Director of the Online Food Science MS Program for final rulings or decisions.

Additional information for the Off-Campus Program may be found on the FSHN Department website (<http://fshn.illinois.edu/online>). Please peruse the website content as this changes frequently. If you have questions, please contact Dr. Dawn Bohn, Director of the Online Food Science MS Program, or Ms. Audra Martin, Office Support Specialist.

Again, congratulations and welcome to the program! We are pleased that you have accepted this challenge and have joined the FSHN Department for your advanced studies.

Sincerely,
Sharon M. Nickols-Richardson, PhD, RD
Professor and Head, Department of Food Science and Human Nutrition
University of Illinois at Urbana-Champaign

.....

The Department of Food Science and Human Nutrition, in conjunction with the Office of Continuing Education, offers an online Master of Science in Food Science and Human Nutrition. Classes are taught by the faculty of the University of Illinois at Urbana-Champaign’s Department of Food Science and Human Nutrition. We hope that you will take advantage of this unique opportunity to obtain an advanced degree in the field of food science.

.....

DEPARTMENT OF FOOD SCIENCE AND HUMAN NUTRITION, UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN

Master of Science Program - Online

The Department of Food Science and Human Nutrition (FSHN) offers an online Master of Science Degree in Food Science and Human Nutrition. Beyond minimum requirements in food science,

the program focuses on fields such as biochemistry, chemistry, microbiology, nutrition, physiology, sanitation, and similar areas related to foods.

The off-campus M.S in Food Science and Human Nutrition program began in 1973 at the request of representatives of the food industry in Chicago. The first off-campus M.S. degree was granted in 1977 and since then, hundreds of people have earned M.S. degrees in Food Science and Human Nutrition through this program. Starting in the Fall of 2010, the program transitioned to a predominantly online format. All required lecture-based courses are delivered via live synchronous online sessions, using a virtual classroom tool. This technology allows an instructor to lecture, and for students to ask questions, interact with other students and even give presentations.

Department of Food Science and Human Nutrition

FSHN is dedicated to programs of teaching and research on the technological aspects of food manufacturing between the farmer-producer and the consumer. The full-time staff of the Department consists of faculty members (professional appointments), academic professionals, research associates (post doctoral), and support staff. It has educational programs at the B.S., M.S., and Ph.D. levels. The graduate programs in FSHN consist of approximately 100 students on-campus and about 60 in the online M.S. degree program. For more information about FSHN, please visit fshn.illinois.edu.

Center for Innovation and Teaching in Learning (CITL)

On the Urbana campus, the Center for Innovation and Teaching in Learning (CITL) works closely with FSHN to coordinate this degree program. In addition to FSHN and the College of Agricultural, Consumer and Environmental Sciences (ACES), CITL also works with the Colleges of Education, Engineering, Applied Life Studies, Liberal Arts and Sciences, and the Schools of Library and Information Science and Social Work to offer graduate credit courses and programs for adults all over the world.

Policies Applying to All Graduate Students

The policies and procedures for all graduate students, including those enrolled in an online program, can be found in following Graduate College and University of Illinois publications:

The Graduate College Handbook for Students, Faculty and Staff
Student Code
Policy and Procedures on Academic Integrity in Research and Publication

These publications are available on the University World Wide Web site <http://www.illinois.edu> or the Graduate College Web <http://www.grad.illinois.edu> or you may request copies from the Graduate College, 202 Coble Hall or the Office of the Vice Chancellor for Research, 4th Floor, Swanlund Administration Building.

The policies and procedures described herein pertain to all students in the FSHN graduate program. *The Graduate College Handbook for Students, Faculty and Staff* is available at <http://www.grad.illinois.edu/gradhandbook/>. It explains your privileges and responsibilities as a graduate student, describes many of the services provided to you by the University, and summarizes the Graduate College regulations that apply to all graduate students. Much of the handbook deals with rules and regulations, but it also suggests ways in which exceptions can be requested for good reasons. Supplies of this handbook are limited, but can be obtained from the Graduate College, 202 Coble Hall. The Graduate College strongly recommends that students visit the above website to utilize the on-line handbook.

The *Student Code* is available in a searchable format at http://www.illinois.edu/admin_manual/code/.

Requirements for admission to the Master of Science program

For admission to the Graduate College, a student is required to have a baccalaureate degree. It is desirable, but not required, that this degree be related to physical, biological, agricultural or engineering sciences. Necessary background courses include physics, calculus, general chemistry, organic chemistry and microbiology. If your background is deficient in these areas of study, you will be expected to remedy these deficiencies through additional study. Correspondence courses, other distance education courses, or traditional classroom courses can be taken to satisfy prerequisite requirements. Credit earned to satisfy background requirements is not applied towards an advanced degree. The minimum grade-point average (GPA) required for admission to graduate study is 3.0 (A = 4.0) computed from the last 60 hours of undergraduate work. If your undergraduate GPA is less than 3.0, you *may be* admitted on [*limited status*](#). Students on limited status must have a minimum graduate GPA of 3.00/4.00 by the end of the first semester. Students must also submit a statement of purpose and three supporting letters of recommendation. These materials can be uploaded directly to the [*ApplyYourself Application Network*](#).

All students whose native language is not English must take the Test of English as a Foreign Language (TOEFL) exam. Minimum score requirements can be found on the [*Graduate College website*](#).

Deadlines for application for admission to the online masters program in FSHN are as follow:

- Fall – June 1
- Spring – October 1
- Summer – February 1

All materials must be submitted by this deadline in order to be considered for the respective semester.

Grading System

The University of Illinois awards letter grades on the A through F scale. For graduate students, only courses taken for graduate credit and graded on the A through F scale are included in the GPA calculation. Any repeated course is ignored when computing the GPA and the accumulated credits toward a degree. Credit for a course in which a student has received an F cannot be counted toward the degree; however, a zero is used in calculating the GPA. Grades are evaluated numerically on a four-point scale for the computation of GPA as follows:

A+ = 4.00	A = 4.00	A- = 3.67
B+ = 3.33	B = 3.00	B- = 2.67
C+ = 2.33	C = 2.00	C- = 1.67
D+ = 1.33	D = 1.00	D- = 0.67
no + for F	F = 0.00	no - for F

Other symbols used by the University grading system can be found in the [Graduate College Handbook](#).

The GPA includes all hours of course work with grades A through F and ABS. The GPA does not include course work transferred from other universities, with the exception of the other UI campuses. Students in the FSHN M.S. program are required to maintain a GPA of at least 3.00/4.00. If your GPA falls below this minimum, you will be placed on [probation](#), and will have one semester to raise your GPA to 3.00/4.00.

.....

Minimum Requirements for the Non-Thesis Masters Degree

In summary:

1. Thirty-two (32) hours of course work at the 400- and 500-levels. Up to 8 hours of FSHN 598 may be used to fulfill this requirement. More than two hours of S/U graded sections of FSHN 598 require approval by the Graduate Program Committee.
2. A GPA of at least 3.0 (4.0=A) for all graded courses taken during the student's enrollment in the M.S. degree program.
3. Pass a final oral examination administered by three FSHN faculty members, all of whom are members of the Graduate College.
4. Completion of all requirements within five years of initial registration in the Graduate College.

A minimum of **32 hours** of credit at the 400 or 500 level is required for the M.S. Degree in Food Science and Human Nutrition. FSHN 414 (food chemistry), FSHN 461 (Food Processing I), and FSHN 471 (food and industrial microbiology) are all required courses. If FSHN 414, 461, or 471 were previously taken at the University of Illinois at Urbana-Champaign, or similar courses were taken at an accredited institution, the student is eligible to forego taking those courses again. In addition, if FSHN 414, 461, or 471 were taken more than 5 years ago, consideration should be given to taking them again; however, credit will not be given for taking FSHN 414, 461, or 471 (or equivalents) again. **At least 12 hours of coursework must be at the 500 level.** After completion of coursework, you must satisfactorily complete an oral examination covering your area of specialization (if you choose one) and the general field of food science.

.....

[Transfer of Credit](#)

Per the Graduate College, courses taken as a non-degree student and courses taken at other accredited institutions may be transferable, subject to Departmental and Graduate College approval. All transfer credits are handled by [petition](#) to the Graduate College. The Graduate College will not consider transfer of courses for credit if those courses were completed more than five calendar years prior to the date of transfer. Only those courses with grades of “B” or better will be considered.

Oral Examination

Upon completion of the course requirements, you must satisfactorily pass a final oral examination administered by an advisory committee. In addition to your final advisor (who will act as the committee chair), you will ask at least *two members* of the University of Illinois at Urbana-Champaign Graduate Faculty to serve on your committee. These members should be of various areas of specialization.

The oral examination is a comprehensive oral examination focusing on course work as well as any special projects (i.e. FSHN 598 projects). **Prior to scheduling your oral examination, you must contact Dr. Bohn for committee review and academic history evaluation. Dr. Bohn will also provide you with detailed instructions regarding the arrangement of your oral examination.**

Students must provide a copy of their transcript to each member of the committee prior to the examination. It is the student's responsibility to assure that they have met all degree requirements prior to the scheduling of their final exam.

The advisory committee must reach a unanimous decision about the performance on the final examination. Its decision of "pass," "decision deferred," or "fail" is communicated to the Graduate College. Students should provide a copy of the M.S. Final Examination Certification to their committee.

Deadlines for oral examination completion in order to be considered for specific graduation dates are as follows:

May – April 1
August – June 1
December – November 1

Academic Integrity

The University is committed to learning and research, and hence is committed to truth and accuracy. Integrity and intellectual honesty in scholarship and scientific investigation are, therefore, of paramount importance. Academic misconduct includes, but is not limited to:

1. Fabrication or falsification of data, including intentionally misleading, selective, or deliberately false reporting of credentials information.
2. Unacknowledged appropriation of the work of others, including plagiarism, the abuse of confidentiality with respect to unpublished materials, or misappropriation of physical materials.

3. Evasion of, or intentional failure to comply with research regulations or requirements, including but not limited to those applying to human subjects, laboratory animals, new drugs, radioactive materials, genetically altered organisms, and standards of safety.

Differences of interpretation or judgment, or honest error, do not constitute academic misconduct. Any member of the University community who becomes aware of an apparent instance of fraud or other academic misconduct relating to research or scholarship has the responsibility to try to resolve the issue, if possible, in consultation with those directly involved. If consultation is inappropriate or unsuccessful, it is incumbent upon the individual to report the suspicious circumstances to the Department Head (or comparable administrator) of the unit concerned, or to the person appointed by the vice-chancellor for research as the research standards officer.

The unit executive officers, deans, other administrators involved, and the entire academic community are charged with protecting the academic careers of persons who have in good faith reported possible fraud or misconduct in scholarship or research.

Graduate students are expected to adhere to the highest standards of academic integrity in all areas of their training. Typical areas in which graduate students have concerns about infractions of academic integrity (called academic misconduct) include honesty in the classroom and laboratory, fabrication or falsification of data, plagiarism, lack of compliance with research regulations, allocation of credit, authorship of publications, and priority of discovery. Plagiarism is often a sensitive issue because all nations do not have the same legal restrictions on the unacknowledged use of the work of others. Questions on academic integrity should be directed to your advisor.

You are responsible for knowledge of, and compliance with, [*University of Illinois policies on academic integrity*](#), which describes University policy and prescribes procedures for fact-finding and adjudication of allegations of academic misconduct. Although it focuses upon deterring and penalizing unacceptable conduct, its purpose is to promote compliance with the highest scholarly standards.

Background reading on issues of academic integrity is highly recommended to all graduate students and faculty advisors. Discussion of academic and research standards between graduate students and their advisors is strongly encouraged. A good starting point is *On Being a Scientist*, published by the National Academy of Science, National Academy Press, 2101 N.W. Constitution Ave., Washington, DC, 20418-0006

Technology Requirements

In an effort to better serve our students, we have decided to offer this program via the Blackboard Collaborate Synchronous Online Delivery tool. By utilizing Blackboard Collaborate, all students, no matter where in the world they are or their travel schedule may take them, can participate in the program. As noted, Blackboard Collaborate is a synchronous technology, meaning that instruction and attendance take place simultaneously. This online program is not a traditional, self-paced online program. Essentially, it is exactly like a regular classroom-based program, except that the classroom is virtual. All students are required to download the Blackboard Collaborate program onto their computer. If you intend to use a work computer to attend class, please meet with your technical service representative to ensure that your company does not have a firewall that blocks the Blackboard Collaborate web-based program.

All students are required to have a reliable microphone in order to participate in the program (preferably one that is noise reducing). You will be asked questions during the courses and will need a clear microphone in order to answer the questions. In addition, students are also required to have scanning ability for assignments and on the days of exams.

Library

The University of Illinois at Urbana-Champaign CITL Library provides students with convenient access to course library materials, so off-campus students will have similar access to library materials to those available to students on-campus. For more information about off-campus library services, students may call (217) 333-3773.

Grievance Policy

All members of the University community are expected to observe high standards of professional conduct and ethical behavior in graduate education (Guiding Standards for Faculty Supervision of Graduate Students). Although infrequent, in a large and heterogeneous scholarly community, problems may arise.

University policy strongly encourages all students who believe they have a grievance to use all appropriate avenues for informal resolution before initiating a formal grievance. Students in Food Science and Human Nutrition are encouraged to discuss the issue with the faculty or staff member with whom the problem has arisen. If a satisfactory solution is not forthcoming, the student should discuss the issue with his or her advisor, the director of graduate studies, or the head of the department, who shall attempt to find a resolution acceptable to both parties. The student may also consult with the Graduate College, the Office of the Dean of Students, the Ombuds Office, the Office of International Student Affairs, or other sources.

The formal procedures for grievances recognized by FSHN are outlined in the annual [*FSHN graduate handbook*](#).

Other Information

Food Science and Human Nutrition graduate students are encouraged to participate in professional organizations, such as the Institute of Food Technologists, American Oil Chemists' Society, American Association of Cereal Chemists, and the American Chemical Society.

.....

Graduate Admissions Policies and Enrollment Procedures

The following are a series of questions and answers intended to provide students with information on admission and enrollment policies.

.....

MUST A PERSON BE ADMITTED TO THE GRADUATE COLLEGE BEFORE ENROLLING IN AN ONLINE COURSE?

No. Persons are permitted to enroll in a course as a non-degree student if course eligibility requirements are met and space is available. However, priority is given to Graduate College degree students.

.....

WHO IS ELIGIBLE TO ENROLL IN AN ONLINE COURSE?

CITL courses at the 100, 200, 300 and 400 levels are open to undergraduates who can meet course prerequisites. CITL courses at the 500 level are open only to persons who have a baccalaureate degree from an accredited institution of higher education and also meet course prerequisites.

Persons may enroll in a course as a non-degree student by paying the regular tuition and fees. Enrollment as a non-degree student is noted on the permanent University record and is subject to space availability and instructor permission. Non-degree credit may be petitioned towards the M.S. degree. A maximum of 12 hours of non-degree credit is allowed.

.....

DOES ENROLLMENT IN AN ONLINE COURSE AUTOMATICALLY INDICATE APPLICATION FOR ADMISSION TO THE GRADUATE COLLEGE?

No. Enrollment in a course and application for admission to the Graduate College are two separate and distinct processes. Applying for admission to the Graduate College requires that the student: a) complete and submit the application for admission to the Graduate College and the application fee to the Office of Admissions and Records, b) submit all required supporting credentials to the proposed major department and c) be accepted for study by the graduate department. See the answer to the question, "Where can I obtain an application for admission or readmission to the Graduate College?" for further information about application for admission to the Graduate College.

.....

IF I PLAN TO PURSUE AN ADVANCED DEGREE IN WHOLE OR IN PART THROUGH CITL STUDY, WHEN SHOULD I APPLY TO THE GRADUATE COLLEGE FOR ADMISSION?

Persons who plan to pursue an advanced degree are strongly encouraged to apply for admission to the Graduate College during the semester in which they take their first course. Taking one or two University of Illinois at Urbana-Champaign graduate level courses prior to applying to the Graduate College may be advantageous for students, especially those with a low undergraduate GPA. Performing well in graduate-level courses increases the likelihood of admittance to the Graduate College.

.....

WHAT HAPPENS IF I WANT TO PURSUE AN ADVANCED DEGREE, BUT DID NOT APPLY FOR ADMISSION TO THE GRADUATE COLLEGE DURING THE SEMESTER IN WHICH I ENROLLED IN MY FIRST COURSE?

Persons who did not apply for admission to the Graduate College during the semester in which they took their first CITL course are automatically classified as non-degree students. This classification permits students to enroll in CITL courses without being admitted to the Graduate College, as long as course eligibility requirements are met and space is available.

Persons who decide that they want to pursue an advanced degree after taking one or more courses as a non-degree student: a) first must apply for admission to the Graduate College and be admitted; and b) then petition for acceptance a maximum of 12 hours of UIUC non-degree credit earned prior to admission. Students can also petition for transfer of credit from other universities. The Graduate College will not accept more than **12 hours** of non-degree credit and **12 hours** credit from another accredited institution.

Students should remember that a well-planned program is much more than the mere accumulation of credits. Therefore, persons interested in pursuing a degree should apply for admission early and have a program of study approved to insure that credits earned in courses are applicable to their programs.

.....

WHERE CAN I OBTAIN AN APPLICATION FOR ADMISSION OR READMISSION TO THE GRADUATE COLLEGE?

Forms and information on admission to the program may be obtained at:

<http://www.grad.illinois.edu/admissions>

ONCE I HAVE COMPLETED AN ADVANCED DEGREE, MAY I CONTINUE TO ENROLL IN ONLINE COURSES?

Yes. Persons who have completed a degree may continue to enroll in courses. These persons are assigned CITL non-degree status.

IF MY QUESTIONS ABOUT GRADUATE COLLEGE ADMISSIONS POLICIES AND ENROLLMENT PROCEDURES HAVE NOT BEEN ANSWERED IN THIS MATERIAL, WHERE CAN I OBTAIN ADDITIONAL INFORMATION?

Please contact Dr. Dawn Bohn, Director of Extramural programs via email at dbrehart@illinois.edu or via phone at 217-333-0881.

.....

Food Science and Human Nutrition Graduate Credit Courses Offered in Online

The following courses are offered on a rotational basis. Other courses from allied fields, such as Animal Science, Crop Sciences, and Agricultural Economics, are offered periodically. A class may be cancelled if registration falls below 10 students.

FSHN 414 Food Chemistry

Examines the chemical aspects of major food components: water, carbohydrates, proteins, and lipids; properties of pigments, salts, and food dispersions. Prerequisite: Organic chemistry. 3 hours.

FSHN 440 Applied Statistical Methods

Statistical methods involving relationships between populations and samples; collection, organization and analysis of data; and techniques in testing hypotheses with an introduction to regression, correlation, and analyses of variance limited to the completely randomized design and the randomized complete-block design. Prerequisite: Algebra. 4 hours.

FSHN 460 Food Processing Engineering

Examines application of process engineering principles to the conversion of raw agricultural materials into finished food products. Topics include units and dimensions, materials balances, energy balances, thermodynamics, heat transfer, psychrometry, refrigeration and mechanical separations. Prerequisites: Physics and calculus. 3 hours.

FSHN 469 Package Engineering

Cross-disciplinary study of the materials, machinery, research, design, techniques, environmental considerations, ethics and economics used in the global packaging industry with emphasis on the implementation of improved technologies for the problems unique to food packaging. An emphasis on the broad, systems-based nature of packaging will be maintained throughout the course. Prerequisite: chemistry, physics, calculus. 3 hours.

FSHN 471 Food and Industrial Microbiology

Relationship of microorganisms to food manufacture and preservation, to industrial fermentation and processing, and to sanitation. Prerequisite: Organic chemistry and experimental microbiology. 3 hours.

FSHN 517 Fermented and Distilled Beverages

The production technology, microbiology and chemistry (including the compositional chemistry, flavor chemistry, and chemistry of aging) of fermented and distilled beverages. Prerequisite: Graduate student status, or a food microbiology course and a food chemistry or biochemistry course. 2 hours.

FSHN 518 Chemistry of Lipids in Foods

Detailed examination of the chemical and physical properties of lipids in foods. Prerequisite: food chemistry. 3 hours.

FSHN 595 Food Science Advanced Topics

Detailed lectures and/or laboratory studies of selected topics in Food Science. Study may be specialized topics in anyone of the following fields: (A) Food Chemistry; (B) Food Microbiology; (C) Nutrition; (D) Food Processing/Engineering. 1 to 4 hours. Topics to be offered include (but are not limited to):

Advanced Topics in Sensory Science. This course will deal with more in-depth and current topics in Sensory Science beyond the scope of an undergraduate introductory sensory course. The main course topics to be discussed are the physiological and psychological basis for sensory evaluation, Thurstonian Modeling in Difference Tests, multivariate statistical methods for sensory studies. Students will discuss and critique current research papers in sensory science and develop a proposal for sensory evaluation research. 3 hours.

Flavor Chemistry and Analysis. Discussion/demonstration of sensory and instrumental methods used in modern flavor research. 2 or 4hours.

Food Enzymology. Principles of enzymatic reactions, factors affecting enzyme activity, and use of enzymes in analytical and food processing applications. Discusses the influence of parameters such as concentration of substrate and enzyme, pH, temperature and inhibitors on enzymatic activity. Provides specificity and mechanism of action of enzymes in the context of their roles in foods by considering examples selected from enzymes of importance to food science. involve lectures and exercises commonly used in basic and applied research in food enzymology. Regular discussions of recent peer-reviewed papers dealing with major classes of enzymes. Prerequisite Biochemistry. 3 hours.

Water Relations in Foods. Advanced study of the behavior of water and solids in ingredient and real foods systems, specifically in relation to food safety and stability. Major topics covered include properties of water, water activity,, water mobility, and solids mobility (e.g., the glass transition). Practical techniques to measure these parameters, including sorption isotherms, nuclear magnetic resonance spectroscopy and imaging, and differential scanning calorimetry, are discussed in detail. 4 hours.

FSHN 598 Advanced Special Problems

Supervised research on special problems in Food Science. 1 to 8 hours. Project must be approved by topic advisor prior to the beginning of the semester.

FSHN 461 Food Processing, I.

Principles, unit operations, and applications of food preservation and processing by high temperature, refrigeration, and freezing processes; includes heat transfer, kinetics, chemical and microbial changes in food as a result of processing. Also, principles and applications of food processing unit operations based upon the combination of heat and/or mass transfer, including such unit operations as evaporation, freeze-concentration, membrane separation, dehydration, centrifugation, extrusion, as well as water activity control. Lecture-based course. 4 hours.

FSHN 462 Food Processing, II.

Laboratory course for FSHN 461. Includes labs on blanching, pasteurization, sterilization, freezing, freeze drying, dehydration (tray drying, drum drying and spray drying), evaporation, and extrusion; discussion and labs. Additional fees may apply. 2 hours.

M.S. Final Examination Certification (non-thesis)

Name of Candidate

UIN

This is to certify that we have administered to the above student an appropriate final examination for the Master of Science degree. The result of the examination is:

- Pass.
- Decision deferred. The committee is considered to be in temporary adjournment until _____
(a specified date that must be within six months of the first defense date). *This category should be used only if the committee intends to hold another defense. Registration is required during the semester when the second defense is held.*
- Fail. Students who fail the first exam may, at the discretion of the committee and according to departmental rules, be granted another opportunity to take the examination after completing additional work. The chair will inform the Department Head if the student is allowed a second examination.
